Who am I?

I'm Gunasekhar Jenni, a University of Paderborn master's student studying computer science. I'm currently enrolled in data science as a specialization and actively working on Generative AI and Systems Engineering based University Project. As a computer science undergraduate, I have worked on projects which required concepts like IoT, Python, Mixed Reality and machine learning.

What have I done before?

I have worked as a project intern for a Bengaluru, India-based company, where we worked alongside industry experts and built a project based on IoT and ML. I was also actively involved in projects during my undergrad, such as the Automobile Review System and the Accident detection and rescue system, for which I published a paper in the International Journal of Advanced Research in Computer and Communication Engineering. I was also involved in an IoT-based project under the guidance of Nokia Inc. called the Smart Management System for Pharmaceutical Refrigerators. Currently, I am also working in Fraunhofer IEE based in Kassel as a Research Assistant.

How will I contribute to your organization?

- As a student I can bring fresh perspectives and innovative ideas to the table, helping the company stay up-to-date with the latest technology developments.
- As a master's student, I have experience conducting research, which can be useful in a corporate setting.
- I will have the opportunity to work closely with other employees. As a student, I have experience working in teams and collaborating on projects.
- I am eager to learn and gain practical experience. My eagerness to learn and willingness to take on new challenges can make a positive impact on the company. I can ask questions, seek feedback, and take the initiative to learn new skills.

Best regards,
Gunasekhar Jenni
